

PRD: Post lesson review fit and finish

Author: Alicia Chan

Date created (or last modified): Jul 29, 2024

Status: Implementation ▾

Description:

Touch-ups across post-lesson review to improve UI and polish in advance of the brand relaunch moment.

Problem / Why / Hypothesis:

What is the user problem we're trying to solve?

- Improve usability / comprehension across post-lesson review surfaces

What is the business problem we're trying to solve?

- Students don't have a compelling reason to return to Cambly aside from booking or attending their lessons and using other tools and resources to augment their English language learning experience.
- Lesson recordings are a key differentiator that Cambly offers learners; we can amplify the importance of reviewing the right snippets and insights for learners to make reviewing lesson materials more accessible and effective.

What is the problem with the existing situation?

- AI generated feedback:
 - Current implementation does not provide context / differentiation between positive and critical feedback as we weren't able to implement the original "confetti" designs; we need to revisit this as without the context it's hard to understand the purpose of each card.
- Transcript review on web:
 - Finish / polish of some elements were not implemented as designed, a round of clean-up needed to improve the overall quality
- Emojis / scrubbing:
 - We introduced emojis in the classroom + saved them in the chat transcript, but we don't tell learners how to use them or that they can use them in that way
- Lesson history view tap state clean-up:
 - Hard to know where to click to get to lesson review surface vs. to the tutor profile

How will our proposed changes improve the situation?

- Proposed changes will address all the above pain points to make post lesson review more usable and understandable!

Impact:

Who is the user we're solving for?

- Cambly adult learners who take private lessons

What % of the population is that segment?

- 90% of Cambly adult learners (60K of 67K adult WALE)

How severe is this problem?

- Unclear, but each of the proposed fixes are bug fixes / polishes that we deprioritized after initial launch in order to move onto other MVPs. We need to go back and clean these up and are using Cambio and marketing spotlights as reasons to do this.

How will success appear? Is it a behavioral metric? Is it reduction of a stated user pain point?

- Increased engagement across all these surfaces.
- We may also see increased engagement on particular surfaces due to specific interventions:
 - AI generated feedback:
 - Increased interactions with feedback scrubbing; more likely to engage with the feedback once learners understand what the feedback is
 - Transcript review on web:
 - Engagement with transcript scrubbing
 - Lesson history list
 - Increased engagement on lesson review overall as a result of more intuitive click behavior

Changes:

Priority	Surface	What	Design links	Web done?
P0	Video playback	Delete video button unresponsive (jira ticket) Christian addressed (slack)		✓
P0	Chat tab in lesson review	Max width on right panel (jira ticket) [Is this an opportunity for us to impose a maximum width across all the tabs?]		✓
P0	Feedback tab	Stats UI update with info / helper text		✓
P1	ALL	User ed on how to use the different tabs	Figma link	✓
P1	Lesson history list	Tap target updates: - Avatar tap = tutor profile (adding back avatar → tutor profile) - Everywhere else tap = lesson detail		✓

Priority	Surface	What	Design links	Web done?
P1	Lesson history list	Calls that did not connect should not be tappable		✓
P1	Feedback tab	Tutor info UI cleanups		✓
P1	Feedback tab	Minutes deducted update (copy change because "minutes" is said 3x in 2 lines of copy)		✓
P1	Feedback tab	AI generated feedback width: - Make the AI generated feedback cards a fixed width - Kudos: add confetti		✓
P1	Transcript tab	Avatar + text misaligned when there's no highlighting Text becomes more misaligned when text is highlighted		✓
Depri from P1	Transcript tab	Transcript scroll jumps as the highlights move down the page, making it harder to read		
Depri from P1	Lesson history list	Double scroll /infinite scrolls for the lesson history list		
P2	Feedback tab	AI generated feedback: Update styling / text size with new system		✓
P2	Lesson history list	Labels content / color updates		
P2	Chat tab	Chat bubble color update		
P2	Feedback tab	Tutor feedback styling doesn't match the other feedback (place it into a card)		
P2	Feedback tab	Cambiofy help button → Cambiofy the subsequent modals in the refund flow		✓
P2	Video playback	Black bars / letterbox frame on video recording		
Depri from P2	Lesson history list	Mweb (~5% of lesson review engagement on web, or 2% of all lesson review engagement): - Screen doesn't scroll when scrolling at the video area (due to lesson review being in a modal [screen recording]) - Follow-up here to think about mweb vs. native - Follow-up here to think about implementing a full page view - When i tap on LH tab the whole page refreshes and i have to scroll back down		

Priority	Surface	What	Design links	Web done?
		• (LH) list view scrolling buggy - once lazy loading happens i cant see top of list • List view spacing is inefficient • I shouldn't be able to tap on an unconnected call • Did not connect label should be grey and "did not connect" • When closing a lesson detail view i get redirected to a weird blank state

Dependencies:

Link to other projects which might block this launch?

Success Metrics / KPIs:

What metrics will you watch to inform whether your experiment is successful or not?

Instrumentation Needs (PM to assess w/ Analytics Eng/PA)

What do we need to measure (including but not limited to Success Metrics)?

What existing data sources can we derive it from?

What new data sources do we need to create?

What logging do we need to add?

GTM (PMM to assess):

To roll this product out (with GM support) we will need to:

- Adoption
- In-product education/tooltips
- Emails/notifs
- Targeting events

Anticipated Impact on Tutor Teams (Tutors to assess):

What is the impact on tutors' day-to-day operations?

What is the impact on tutors' accounting/financials?

What is the impact on tutor policy and/or guidance?

What tracking will the tutor team need? (Cambly admin view and Metabase)

What in product notifications would support tutors in this launch?

Anticipated Impact on Support Teams (Support to assess):

Using green/yellow/orange/red as signals, what is the anticipated impact on support?

- Impact on support load by ticket count, by ticket handle time, and by projected duration of impact. If the anticipated impact is yellow or higher, include on the experiment dashboard a query for tracking ticket volume by bucket, and share the dashboard with Product Ops.
- Are updates to the public Help Center, macros, or internal Confluence documentation required?
- Anticipated cost of make-goods, both free lessons and plan extensions. If over \$10k, Finance requests advance notice.
- Do we anticipate an impact to Cambly's reputation, and do we accept that impact?
- Will support teams need new or modified tools to support customers with the change?

Potential Legal Questions or Concerns (PRIVILEGED)

Is there anything about this initiative that should be flagged for a more in-depth legal review? Some quick examples (not exhaustive!):

- Log-in flow to make sure users are properly agreeing to terms;
- Initiatives that give more/less control to tutors (e.g., pay, scheduling, curriculum)
- Use/sharing of user data (e.g., recordings of sessions, behavioral advertising, etc)
- Changes to our GDPR/CCPA/LGPD/etc data-deletion/export process?
- Copyright or trademark concerns

When in doubt, just ask Amber for a quick review.

Key Dates:

When do we want to launch this experiment or feature? How long will we leave the experiment running for? Who else needs to know?

Target markets:

e.g. Turkey, Brazil

- [PRD: Lesson transcript + video scrubbing](#)

Web Focus

P0. Bug fixes

- Delete video button unresponsive (jira ticket)
- Max width on right panel (long URL in chat) (jira ticket)
- ~~Return minutes condition/Modal (only support for showing modal) (jira ticket)~~ (fixed by Zach on marketplace)

1. Video recording / playback

- (P2) Unnecessary black bars
 - AC note: out of scope for now, given how we generate/receive the recording

2. Feedback Tab

- (P1) Tutor Info updates (UI polish - date format, additional tutor options)
- (P2) Help button update (UI polish)
 - Cambiofy the help button modals
- (P0) Stats update (UI polish & functionality - mobile parity)
- (P1) Minutes deducted update
- (P2) Tutor feedback
- (P1) AI generated feedback

3. Transcript Tab

- (P2) Avatar / highlight alignment issues

4. Slides Tab

5. Chat Tab

- (P2) Chat bubble color update

6. Entry point / Lesson History list

- (P1) Unconnected calls should not be tappable
- (P1) Labels (content & color)
- (P1) Avatar tap = tutor profile
- (P1) Everywhere else tap = lesson detail

7. Education / General

- (P1) Emoji
- (P2) Camiofying "Help" modal

Mweb Focus

- When i tap on LH tab the whole page refreshes and i have to scroll back down
- (LH) list view scrolling buggy - once lazy loading happens i cant see top of list
- List view spacing is inefficient
- I shouldn't be able to tap on an unconnected call
- Did not connect label should be grey and "did not connect"
- When closing a lesson detail view i get redirected to a weird blank state
